

Supporting the use of Advanced Technology to Improve Safety and Mobility on America's Roadways

The I-95 Corridor Coalition has entered into a partnership with the U.S. Department of Transportation (USDOT) under the Safe and Efficient Travel through Innovation and Partnerships (SafeTrip-21) Program. This program strives to use advanced technology to improve safety, improve public transportation services, and reduce gridlock on America's roadways. More specifically, these initiatives will allow travelers in selected areas of the I-95 corridor to make better informed travel decisions through a variety of information resources. The elements of the I-95 Corridor Coalition's SafeTrip-21 program include:

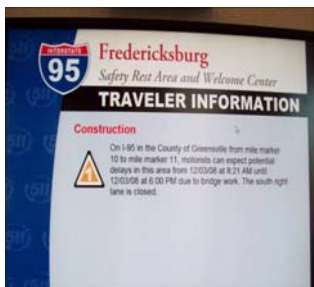

- The Long Distance Trip Planning Website – Launched at www.i95travelinfo.net in June 2009, this

website is based on the I-95 Corridor Coalition/INRIX Vehicle Probe data. Users can view real-time traffic conditions, including travel times across state borders from New Jersey to North Carolina. The website provides both the current and normal travel times between various cities, airports, and other landmarks on key routes in the multi-state region. Origins and destinations are selected from a list of pre-defined locations on the "Travel Time" page. Lastly, visitors to the site also have the ability to zoom the map into any of the six participating states and Washington, D.C. to obtain a closer look at traffic conditions.

- Displaying Travel Times in Public Areas – Travel time data will be displayed at kiosks at the Tysons

Corner shopping mall and at the Fredericksburg (SB) and Skippers (NB) Welcome Centers along I-95 in Virginia. At the Tysons Corner Mall, the display will focus on conditions in the immediate area; the Washington, DC region. At the Fredericksburg Welcome Center, the display will focus on conditions from that location south, well into North Carolina. At the Skippers Welcome Center, the display will focus on conditions from that location north, including at least Virginia and Maryland.

- Providing Travel Time Information to Airport Users – The Coalition along with BWI Airport is developing a website to provide real-time traffic conditions and information on ground transportation options that will enable passengers to better plan their trips to and from the airport, whether by public transportation, taxi, van, bus or private vehicle. Information will be available through kiosks located within the BWI terminal, through wireless devices (e.g., cellular phones), and through the Airport's website.

The Coalition is also working with North Carolina DOT to facilitate the testing and evaluation of providing work zone travel times and speeds to improve efficiency and safety in work zones.

More information on any of the I-95 Corridor Coalition's SafeTrip-21 projects may be found in the project profile on the Coalition website at:
